Built on reliability. Designed for what's next.

Intermodal Transport Control Systems for Public Transport Providers

Mobility That Works for People and Planet

Public transport is a fundamental aspect of modern life. It exists at the heart of our cities, connecting communities, and opening doors to education, employment, leisure, healthcare and opportunity. It keeps people moving with purpose and possibility.

Reliable public transport doesn't just transport passengers; it supports local economies, enables equality, reduces congestion, ensures breathable air, and ultimately delivers a more sustainable future.

It empowers communities and elevates the quality of life for billions of people.

Faced with myriad complex factors, from funding to increasing disruption, rising urban congestion and frontline staff shortages, it has never been more challenging to provide efficient reliable transport. But it has also never been more important to succeed; to deliver not only reliable services – but truly great public transport.

As public transport advocates, together we are charting a road to a better, more inclusive and more sustainable world. And while public transport is only one part of the overall picture, we are a vitally important part.

At ebblo, we design Intermodal Transport Control Systems (ITCS) for efficiency, sustainability, and passenger comfort. By simplifying operations, reducing emissions, and making journeys seamless, we help public transport become the easy, natural choice.

Elevating Public Transport

ebblo helps public transport providers move confidently into the future. Our advanced ITCS solutions adapt as mobility evolves – powered by future-proof technologies and decades of experience. Together, we elevate passenger experiences and make transport systems smarter, greener, and ready for what's next.

Open Innovation for a Changing World

ebblo is open by design – modular, flexible, and built for change. From best-in-class, robust solutions to scalable platforms, open data ecosystems, and next-generation architectures, we deliver what matters: flexibility, control, and security. Our intelligent systems grow, connect, and evolve – so progress is never out of reach.

Smarter, Greener, Passenger-Centric Mobility

We develop intelligent ITCS solutions that enable transport providers to run cleaner, faster, and more accessible transportation networks. Our flexible product suite streamlines operations, improves accuracy, and elevates passenger experiences – helping public transport become the natural choice.

Reliability That Moves You Forward

At ebblo, reliability isn't just a promise – it's the foundation. We combine proven performance with transformative innovation, empowering transport networks to run smoothly, adapt intelligently, and grow sustainably. With ebblo, you gain a partner ready for what's next.

William Taroni
CEO
ebblo International

“At ebblo, we focus on delivering exceptional ITCS solutions that empower our customers worldwide to create seamless, enjoyable journeys for their passengers. Our advanced technology streamlines operations and makes public transport sustainable, accessible, and more attractive – turning it into the easy, natural choice.”

Overcoming Challenges Together With Robust Innovation

Public transport providers worldwide face complex and unique challenges but have the same ambition: making public transport more attractive and the natural choice.

Urban traffic and delays don't have to derail your service. With smart incident response, dynamic dispatch, seamless transfers, and real-time vehicle monitoring, you can keep operations smooth and riders happy. Our advanced ITCS solutions help you cut costs, avoid SLA breaches, and deliver reliability your passengers can trust.

Decades Of Transport Expertise, Delivered Through A Modern Platform

Built with the core capabilities public transport companies need to plan, operate, and scale.

Real-Time Visibility – Real-Time Action

ebblo ITCS solutions and our centralised operations control centre provide the visibility and control you need over your fleet operations. Real-time tracking, dynamic dispatch, efficient incident management, and smart schedule management keep your network running flawlessly. Communicate instantly with crews, tackle incidents before they escalate, and make confident decisions backed by intelligent systems.

Driver Safety with Seamless Device Integration

Safety is at the heart of everything we do. Our smart on-board systems automate routine driver tasks, keep operations secure, and deliver real-time precision. Satellite positioning powers accurate positional control and arrival predictions, while full support for ITxPT, SIRI, and VDV ensures seamless integration with ticketing machines, passenger counters, surveillance systems, voice tools, info displays, and more.

Streamlined Data Management

Managing a transport network shouldn't mean drowning in siloed data. ebblo unifies timetables, duty rosters, and planning inputs into a single source of truth. Our central data management tools securely sync data between onboard devices and the back office, while AI-driven analytics and BI tools power smarter capacity planning and KPI management. Plus, we specialize in streamlining mileage reconciliation between authorities and operators, thus protecting revenue and boosting financial control.

Enhanced Passenger Experience with Stress-Free Travel

At ebblo, it's all about empowering transport providers to offer superior passenger experiences. We deliver accurate, real-time updates across every channel, so passengers always know what's next. Our smart systems keep services safe, reliable, and on time, powered by predictive analytics and seamless integration with city infrastructure. The result? A smoother journey, greater confidence, and a better experience for everyone on board.

Effortless Management of EV fleets

Onboarding green-powered vehicles is easier with ebblo. Integrate electric fleet data into your operations with ease, monitoring charge cycles, range, and availability in real time. Dispatchers can plan routes based on battery status, optimize charging schedules, and prevent downtime – ensuring your transition to electric is smooth, efficient, and sustainable.

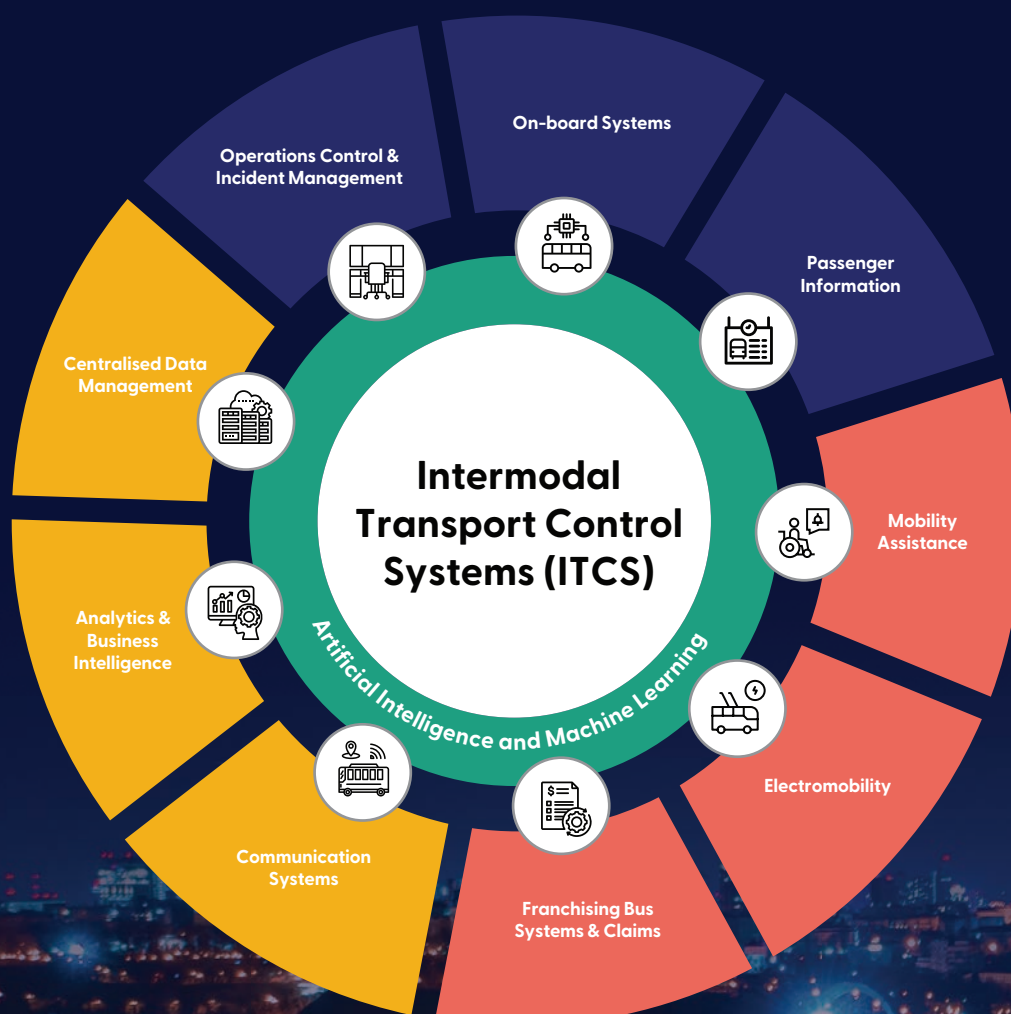

Connected Travel for Inclusive Mobility

Public transport should be accessible for everyone. ebblo empowers you to manage assistance requests in real time, ensuring passengers with reduced mobility get the support they need. Our assistive technology enables you to flag vehicles with audio-visual information, supports easy communication with drivers, and helps to coordinate boarding or seating without delays – delivering safer, more comfortable, and truly inclusive journeys.

ebblo Product Portfolio

Enhancing Every Stage of the Journey

The ebblo product portfolio brings together powerful, integrated solutions that enhance every stage of the transport journey. Designed to simplify operations, elevate passenger experiences, and support future mobility, our secure, scalable solutions grow with your needs.

ebblo: A New Name for a Proven Partner

ebblo reflects the ebb and flow at the heart of mobility. Just as tides rise and fall, cities pulse with constant change—rush-hour peaks, midday lulls, shifting regulations, and evolving passenger needs. ebblo embodies this rhythm, delivering adaptive technology that breathes with the communities, centres on people, and evolves with tomorrow.

We used to be part of Trapeze Group – now we are ebblo. A new chapter begins. Our name may have changed, but what hasn't changed is our proud tradition and passion for delivering innovative technology that transforms how people move.

ebblo serves public transport authorities and operators by providing advanced Intermodal Transport Control System (ITCS) solutions. Our technology doesn't just keep up – it stays ahead. From modular, scalable platforms to open, future-proof systems, we give you flexibility and control as your needs evolve. ebblo empowers you to be ready for tomorrow without sacrificing today.

Our ITCS solutions power public transport in numerous cities and regions around the globe. We embrace diverse thinking that benefits our customers – but our hundreds of employees worldwide are united by shared understanding of how we are delivering for our customers and the communities they serve.

Why We Exist

We provide innovative **ITCS solutions** that enable global communities to deliver great public transport services.

Vision

Inspiring a **shift in mobility** – making public transport the **natural choice** for everyone.

Mission

We simplify complex public mobility challenges, ensuring **operational excellence** for our customers and promoting modal shift through the best **experience for their passengers**.

A Reliable Partner You Can Trust

At ebblo, reliability isn't a feature – it's the foundation for everything we do. We're the partner who shows up, delivers, and stays by your side.

And we keep our promises. With decades of experience and trusted partnerships across the industry, ebblo delivers on time, with systems that work the way they should. We combine global expertise with local support so you always are heard and supported.

The ebblo ITCS solutions are in operation across more than 70 cities and regions worldwide.

Including the following selected authorities and operators:

Proud Member of the Modaxo Family

ebblo is proud to be part of Modaxo, a global collective of technology companies, including many of the world's most respected and widely used suppliers. Modaxo is Constellation Software's (TSX: CSU) people transportation portfolio. Our shared goal is to enable the daily movement of 1 billion people by 2030.

ebblo helps public transport providers move confidently into the future. Our advanced ITCS solutions adapt as mobility evolves – powered by future-proof technologies and decades of experience. Together, we elevate passenger experiences and make transport systems smarter, greener, and ready for what's next.

With over 3,500 passionate and dedicated employees worldwide, Modaxo understands the impact mobility has on the fabric of daily life and is inspired by movement and mobility across all modes of people transportation.

CSI acquire, manage, build and hold industry specific software businesses which provide specialised, mission-critical software solutions to vertical markets growing to \$10.1b in annual revenues.

About Modaxo

Modaxo is Constellation Software's (TSX: CSU) people transportation portfolio. Their sole focus on people transportation is reflected in Modaxo's mission to enable the daily movement of 1 billion people by 2030. With people who are truly passionate about what they do, Modaxo understands the impact mobility has on the fabric of daily life.

From its early beginnings in fixed route bus software, to today's multi-sector, multi-modal global solutions, Modaxo has grown significantly. We now serve a broad range of sectors involved in moving people – including Fixed Route, Demand Response, Paratransit, Tram, Metro, Light Rail, Passenger Rail, Medical Transport, Taxi, School Transport, Aviation, Parking, Traffic Management, and MaaS.
